

Recommendation for a new study of Health Care in Alabama

Adopted by LWVAL Board February 21, 2009

Establishment of a committee to develop study materials and consensus questions on current health care conditions and policies in the state of Alabama, and on barriers to health care in the state, focusing on cost, access, and the quality and equity of care. The study and consensus questions should focus on issues that can be affected by state policy and actions, as opposed to national policies or regulation.

The committee's work should be completed within a two year period, but it may also be delivered to the state board and Local Leagues in phases within the two year period. A phased study and consensus approach is encouraged if feasible.
